DTU CONSULTING GROUP × Blogy

Prompt & Profit - Bizmark'26

Problem Statement & Task Document:

Part 1 : AI Blog Engine Architecture:

Objective-

Design a scalable AI-powered blog generation engine that systematically converts keyword intent into high-ranking, GEO-optimized, conversion-focused blogs through a structured prompt flow, ensuring repeatability, measurable SEO strength, and compatibility with search engines and generative AI platforms.

Analysis Metrics-

- Prompt Architecture Clarity
- Keyword Clustering Logic
- SERP Gap Identification
- Projected Traffic Potential
- SEO Optimization Percentage (via SEMrush or similar tool)
- AI Detection Percentage & Naturalness Score
- Snippet Readiness Probability
- Keyword Density Compliance
- Internal Linking Logic
- Scalability and Replicability

Note: Teams are required to develop a fully functional prototype and provide a detailed technical walkthrough during their presentation. Your submission must include robust logical reasoning and strategic justification, as the prototype will be subjected to a live demonstration and stress-test during the Final Round of the hackathon.

Part 2 : Blogy Dashboard & Product Analysis:

Objective-

Critically evaluate the Blogy dashboard from a growth, UX, and SEO perspective to identify structural weaknesses, conversion gaps, technical risks, and feature opportunities that can strengthen organic ranking performance and improve customer onboarding and retention.

Analysis Metrics-

- Bugs Identified (UX, technical, SEO, indexing)
- User Flow Design (targeting startups and companies as primary customers)
- Conversion Funnel Friction Points
- New Feature Ideation & Innovation Depth
- SEO Structural Risk Identification

• Product Differentiation Strategy
• Technical Scalability Feasibility

Part 3 : Blog Creation & SEO Validation:

Objective-

Using your AI prompt architecture, generate two complete SEO-optimized blogs titled “Blogy – Best AI Blog Automation Tool in India” and “How Blogy is Disrupting Martech – Organic Traffic on Autopilot, Cheapest SEO.” Both blogs must be structured for ranking, authority positioning, conversion performance, and compatibility with search engines and AI answer engines. Publish on any five approved blogging platforms.

Approved Publishing Platforms

• Medium
• LinkedIn
• WordPress.com
• Blogger
• Substack
• Dev.to
• Hashnode
• Tumblr
• Vocal Media
• Quora

Analysis Metrics-

• SEO Score (SEMrush/Ahrefs or similar tool)
• Keyword Placement Accuracy
• Content Depth vs Competitor Pages
• Featured Snippet Eligibility
• Readability Score
• AI Detection Percentage
• GEO Optimization Readiness
• CTA Effectiveness
• Structural Formatting Strength
• Platform Adaptation Quality

Submission Guidelines & Deliverables

1. Strategic Presentation (.pdf | .pptx):

- **Format:** A comprehensive pitch deck not exceeding **5 core slides** (excluding the cover and concluding slides).
- **Objective:** The presentation must provide a rigorous explanation and strategic justification of your proposed solution.
- **Naming Convention:** Documents must be saved as `TeamName_P&P`.

2. Functional AI Prototype:

- **Scope:** A fully operational AI-powered blog generation engine.
- **Validation:** The engine must feature integrated **SEO validation** as per the specifications defined in Part 3.

- **Demonstration:** A technical walkthrough of the prototype's architecture must be included in the presentation. Please note that the engine will be subjected to a **live performance demonstration** during the Final Round of the hackathon.
